

The Australian Monitor AMIS26 is more than just a distribution amplifier

2 mic or line level inputs to 6 mic or line level outputs

- 2 mic or line level inputs (mic is XLR line level in RCA)
- 6 mic or line level outputs (XLR or RCA)
- 24 VDC phantom power individually assignable
- Front panel input to output routing
- Front panel output and input level control
- Front panel output metering

As well as simply providing 2 inputs to 6 outputs, because each input and output is individually switchable to microphone level, it will also function as a microphone preamp.

Input to output routing is selectable on the front panel, therefore separate mic and line inputs can be assigned to either the same or different outputs.

Pair it with the **HSP** or **ISP** series dual or quad channel amplifiers for a cost effective signal distribution system to multiple speakers.
